DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 3/2/04 was filed same with the mailing date of the present application. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.
3. The title of the invention is not descriptive. A new title is changed by the Examiner that is clearly indicative of the invention to which the claims are directed as below the Examiner's Amendment.
4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

EXAMINER'S AMENDMENT

5. The application has been amended as follows:

Art Unit: 2824

- o Change the title to: “SEMICONDUCTOR MEMORY DEVICE CAPABLE OF REDUCING POWER CONSUMPTION”
- o In the Abstract, line 1, delete “The present disclosure relates to a semiconductor memory device.”

Allowable Subject Matter

6. Claims 1-8 are allowed.

7. The following is an examiner’s statement of reasons for allowance:

The prior art of record fail to disclose a semiconductor memory device, comprising, in combination with other cited limitations, a control signal generating circuit to generate first, second, and third control signals; a first switch to selectively couple the first terminals of the plurality of sense amplifiers to a power supply voltage terminal in response to the first control signal; a second switch to selectively couple the second terminals of the plurality of sense amplifiers to a ground voltage terminal in response to the second control signal; a third switch to selectively couple the first terminals of the plurality of sense amplifiers to a first charge recycling store in response to the third control signal; and a fourth switch to selectively couple the second terminals of the plurality of sense amplifiers to a second charge recycling store in response to the third control signal as recited in claim 1.

Claims 2-8 are therefore allowed because of their dependency on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Art Unit: 2824
